

Deungchon Middle School Parent Training

Opening the First Door to Our Children's AI Era

A friendly guide to AI ethics
and AI literacy at home

- Use AI to grow thinking, not to replace it

AI Is Already Around Our Children

For middle school students, AI is no longer a special technology. It is part of searching, homework, translation, images, and videos—an **everyday tool** in their lives.

Key Question	What We Will Learn Today
How should we understand AI?	We will learn how AI makes answers and where its limits are.
What should children watch for?	We will discuss facts, privacy, bias, copyright, and schoolwork ethics.
How can parents guide at home?	We will make family AI rules and helpful conversation starters.

A parent’s role is not to block AI, but to guide children to ask safely and check carefully.

Why should parents talk about AI now?

Use Is Growing Faster Than Conversation

Generative AI is already entering students' learning and daily life, but parents may not yet know how their children use it or what rules they need.

U.S. students aged 13–18

70%

reported that they had used generative AI tools

Parent awareness

37%

reported knowing that their child used generative AI

Usage
Gap

The issue is not AI use itself.

The real concern is that **conversation** and **shared rules** may come too late.

Source: Common Sense Media, 2024.
“Students are embracing artificial intelligence despite lack of parent awareness.”
This is an overseas survey, so Korean families should use it as a reference trend.

- ? When have you tried using AI recently?
- ? How did you check whether the AI answer was correct?
- ? If AI helped with homework, which part was your own thinking?

AI Literacy Means Asking and Judging Well

AI literacy is not just knowing how to use a tool.

It is the ability to **ask better questions, check answers, and make responsible choices.**

Simple Meaning

Children learn to use AI as a helper, while keeping human thinking, care, and responsibility at the center.

1 Human-centered thinking

Ask: “What is my own idea?”

Use AI to support thinking, not replace it.

3 Practical use

Use AI for brainstorming, practice, translation, review, and learning support.

2 Ethical use

Respect privacy, copyright, and others.

Do not use AI to harm or deceive people.

4 Basic understanding

Know that AI predicts patterns.

Its answers can be wrong or incomplete.

A helpful parent question

“How did AI help you, and what did you decide for yourself?”

This question keeps children’s thinking at the center of AI use.

Generative AI Creates Plausible Answers

Generative AI does not “know” in the same way people do. It predicts words, images, or code from patterns and makes an answer that **sounds reasonable**.

1

Looks for patterns

It uses patterns learned from large amounts of text, images, and other data.

2

Builds a likely answer

It connects words and ideas that often appear together in similar situations.

3

Can still be wrong

It may make up facts, mix up sources, or answer confidently even when unsure.

Parent Tip

A fluent answer is not always a correct answer. Ask children: “How did you check it?”

Important word: “hallucination” means an AI answer that sounds true but includes false or unsupported information.

AI Is a Helper; Humans Are the Judges

AI can make learning faster and easier,
but it should not replace a child’s **thinking,**
responsibility, or final decision.

Role	What It Means at Home
AI can help	Find ideas, summarize text, translate words, or give examples for practice.
Students must think	Choose what is useful, check what is true, and explain ideas in their own words.
Parents can guide	Ask how AI was used and what the child understood, changed, or decided.

A good rule is simple:
AI may support the process,
but people own the final answer.

Home conversation starter

**“Which part did AI help with,
and which part did you decide
for yourself?”**

Based on UNESCO and OECD guidance on
human-centered, responsible AI use in education.

Fact-Checking Is a Basic Habit

AI answers can sound confident, but they may still be **wrong, outdated, or missing important context.**

1

Ask: “Where did this come from?”

Look for the source, date, author, and whether the information is traceable.

2

Compare with another reliable source

Check school materials, public institutions, news from trusted outlets, or expert sites.

3

Rewrite in your own words

Do not copy and paste AI answers. Explain what you understood yourself.

Conversation starter at home

“What evidence helped you decide that this AI answer is trustworthy?”

Based on UNESCO and OECD guidance on AI literacy, responsible AI use, and critical evaluation.

Do Not Enter Personal Information

AI tools can save or learn from what users type. Before using AI, children need a simple rule: **when it identifies a person, do not enter it.**

Information to keep out of AI prompts

- | | | | |
|---|--|---|---|
| 1 | Names, phone numbers, birthdays, and addresses | 2 | School, class, teacher, or friend details |
| 3 | Faces, photos, voices, and location clues | 4 | Passwords, account IDs, or private family stories |

Parent conversation starter

“If this prompt were shown to everyone, would anyone know who you or your friend are?”

Family Rule: Think before typing

When in doubt, remove names and details, or ask a parent or teacher first.

Based on common privacy guidance for children's safe AI use and Korea's educational guidance on responsible AI use.

Watch for Bias and Deepfakes

AI can help people create quickly, but it can also repeat unfair patterns, make fake media look real, or spread words that **hurt real people**.

Bias

AI may repeat unfair patterns

If the data includes stereotypes or missing voices, AI answers may also be unfair or one-sided.

Deepfake

Fake images and voices can look real

A photo, video, or voice clip made by AI can damage trust, privacy, and safety.

Respect

Online words still affect real people

Do not create or share content that mocks, excludes, threatens, or embarrasses another person.

Family Rule

**Pause before sharing.
Check if it is true, fair,
and respectful to others.**

Set the Line Between Help and Ghostwriting

AI can support learning, but it should not do the thinking, writing, or final work for the student. The goal is **learning with honesty**.

Helpful Support for Learning

- ✓ Brainstorm ideas before writing and choose your own topic.
- ✓ Ask for explanations, examples, or practice questions.
- ✓ Use AI to check grammar, then revise in your own words.
- ✓ Say when and how AI helped if the teacher asks.

Crossing the Line into Cheating

- ! Submit an AI-written answer as if it were your own work.
- ! Copy text without checking facts, sources, or meaning.
- ! Hide AI use when the task requires your own thinking.
- ! Use AI to avoid learning, practice, or responsibility.

Simple Rule

AI may help the process, but the student must own

Parent conversation starter

“Can you explain this in your own words?”

A simple disclosure sentence

“I used AI to brainstorm ideas, but I checked the facts and wrote the final answer myself.”

At Home, Start by Trying AI Together

Parents do not need to be AI experts.

The most helpful first step is to **sit together, try one task, and talk about the result.**

1

Choose one safe task

Try translation, vocabulary practice, brainstorming, or summarizing a short text.

2

Ask what AI helped with

Let your child explain the prompt, the answer, and what they changed.

3

Check one important fact

Pick one claim from the AI answer and compare it with a reliable source.

4

Agree on one family rule

Keep the rule short, visible, and easy for everyone to remember.

Good
News

Children learn safer AI habits
when adults show curiosity first,

A simple family rule to try

**“AI can help us learn,
but we check, think,
and decide together.”**

Tip: Write one family AI rule on paper
and update it as your child’s use changes.

Five Family Promises for Responsible AI Use

AI education begins with small habits at home.
When parents and children talk together,
AI becomes a **safe learning partner**.

1 Protect personal information

Do not enter names, photos, passwords, locations, or private family details.

3 Say when AI was used

Be honest about AI help in homework, writing, images, or presentations.

5 Ask for help

If an AI answer feels strange, harmful, unfair, or too personal, talk with a parent or teacher.

2 Check facts before trusting

Ask where the answer came from and compare it with reliable sources.

4 Think first, then ask AI

Write your own idea first, then use AI to improve or practice.

Together, school and home can guide children.

**The goal is not to fear AI,
but to raise children who can
use it wisely and kindly.**
